

The circular plot displays the number of operators for various representations of $SU(3) \times SU(3) \times SU(3)$. The plot is divided into sectors by color, ranging from red (top) to blue (bottom). The radial axis represents the number of operators, with labels at 10^2 , 10^4 , and 10^6 . The angular axis represents the representations, with labels for each sector. The plot shows a large number of operators for the $(3, 3, 3)$ representation, which is the largest sector.
